## NFC DAY, 2020

Dear All,

NFC Day is celebrated every year on June 8, 2020 commemorating the fabrication of first PHWR fuel assembly. NFC started as a Brain Child of Dr. Homi Jahangir Bhabha with limited technological capacities in early 70's and has come long way to show its superiority in scaling up of operations at an unprecedented rate meeting massive requirements of NPCIL's demand. NFC has also proven its competency in the production of advanced materials, alloys, components for nuclear and non-nuclear applications for space, defense, premier academic and research institutions.

In the last 50 years you take any process or plant in NFC, definitely there is a technological development done on par with international standards. I share my pleasure with all of you this day for the praiseworthy performances in every plant, every area like production, quality, maintenance, services, administration and accounts. I congratulate all of you for your exceptional contributions.

Let us strive hard to scale newer peaks through continued high standard of dedication and devotion in our future endeavours.

Thank you.

(Dinesh Srivastava)
